NEW LAUNCH

Delphi OE Remanufactured Common Rail Injectors

Delphi are pleased to announce the launch of our OE remanufactured CR injector range for Car and LCV applications.

This launch completes our offer to the market and enables our customers and installers a choice of New, Reman and Repaired units.

> August 2016

It all starts with Genuine OE components

Engineered and manufactured by Delphi as Original Equipment for some of the world's largest vehicle manufacturers, individual components and complete units are developed to demanding OE standards, and designed to produce powerful, efficient performance which meets and exceeds present and future emissions legislation. OE and aftermarket customers alike continue to trust Delphi as their diesel systems partner.

- New and Remanufactured Units are available from / to all Delphi Distributors and the Delphi Authorised Repair Network.
- Repaired Units are Available from the Delphi Authorised Repair Network and Delphi distributors who have partnered with an Authorised Repair Network member.

> 46 Car and LCV CR Injectors are now available and in stock - as a Delphi OE Remanufactured option, alongside New Units and Repaired Units from the Delphi Authorised Repair Network.

> Delphi Reman CR injectors are supplied with:

- 2 Year Warranty
- €60 / £50 Core Surcharge value
- 12mth Core Return Period
- Clear Core Acceptance Criteria

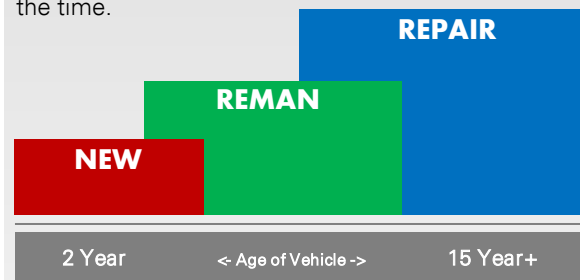

A Solution to Suit All Customers

You don't service only one kind of vehicle or one kind of customer, so you need more than one single solution. Depending on the age and value of the vehicle, the decision of what product and how much to spend can vary for many.

Delphi has developed three options for Common Rail service so that you and your customers can choose the best match to satisfy your workload, your customer's satisfaction, and your bottom line.

With the addition of a high-quality remanufactured option, you now have immediate access to a high quality replacement injector direct from Delphi.

Which means you can offer your customer a competitive price without compromising on the quality of the part or the speed of the service and being confident of a 'vehicle ready' product 100% of the time.

Always remember to follow a few simple steps when installing a Common Rail injector:

Fuel needs to conform to EN589 requirements.

Fit in a clean environment with gloves and goggles.

Re-code to the ECU.

Fit with new HP pipes.

Fit with a new filter.

Re-fit to recommended tightening torque.

Use protective caps.

Scan the QR code for a step-by-step video.

Car & LCV Common Rail Remanufactured Injectors
